I am currently a casual sales associate at Repco, responsible for selling auto parts and car accessories. I am looking for any junior or internship level opportunities as a software developer (paid or unpaid) to gain professional experience in the industry. On my own initiative, I learnt many programming languages and technologies. Through this experience I find myself able to learn and incorporate new technologies quickly and efficiently.

Skills

Python - Analysis and machine learning

C/C++ - Game development and data structures

HTML and CSS - Front end development with Bootstrap

JavaScript - web development

Git

C# - Game development with Unity

Unix systems
